

Defectobook® DIO1000 SFE

Portable Ultrasonic Flaw Detector

Defectobook® DIO 1000 is the latest instrument fully developed and designed by company STARMANS Electronics Ltd.

New generation of electronic components, fast micro-processors and our long-term experience in manufacturing of ultrasonic instruments enabled us to develop really advanced revolutionary ultrasonic flaw detector Defectobook® DIO1000 with the best parameters and functions.

APPLICATIONS:

- Aerospace composite testing
- □ Steel production large castings, hot and cold rolled steel
- Engineering welds and joints
- □ Railway track junctions in manganese steel
- □ Energy austenitic welds, drive shafts etc.
- Automotive spot weld testing
- Customized applications

MAIN FEATURES:

Well balanced between ergonomics and functionality: easy solutions for your daily applications in workshop, laboratory and outdoors. Due to its

adjustable handle, the instrument sits stable on any surface you encounter, even on round parts.

Large bright color LCD screen 1024 x 768 pixels, excellent visibility on the direct sunlight.

Optimum performance and extended connectivity.

Lightweight 1,28 kg / 3,04 lbs and just 34 mm thin.

The DIO 1000 combines the powerful advantages of digital design with the detailed dynamic echo information to bring back the "analog look and performance", using sampling rate of 200 MHz.

Direct access to 12 functions.

Burst pulser selectable and tunable for optimum probe matching to satisfy a wide range of tough-to-penetrate applications.

EMAT for non-contact testing.

Trigonometric flaw location function with curvature correction automatically calculates depth, surface distance and sound path to flaw along with the leg of the inspection when using angle beam probes. All TOF measurements can be displayed in mm, inches or μm .

Standard DAC, JIS-DAC, AVG, API, Automatic Thicknessmeter, Auto Gain, Auto Freeze.

Weld rating calculation simplifies the rating of indications in welds according to AWS Specification D1.1.

B-scan imaging - thickness mode or RGB palette.

STARMANS

DIO 1000 SFE specifications:

GENERAL SPECIFICATIONS

Color TFT sunlight, 1024 pixels (W) X 768 pixels (H) Minimum 60 Hz

Display:
Display Update Rate:
Display dimensions:
True Sampling Rate:
Operating Temperature:
Storage Temperature:
Power Requirements:
Battery:
Descripting Times 99×130 mm 200 MHz, 12-bit -10 °C to 60 °C -40 °C to 70 °C

AC Mains: 100-120 V AC, 200-240 V AC, 50-60 Hz Built-in and external rechargeable Lilon battery pack rated at 3.6 V at 16 Ah

10 hours, depending on display brightness Graphic symbols, International

Selectable in menu, user-defined custom language

Battery:
Battery Operating Time:
Keypad:
Languages:
Memory: 2- 16 GB 224×188×34 mm

Dimensions: Weight: PC Requirements: 224-100-34 Hilli 0.74 Kg without battery + 0.54 kg battery for 10 working hours PC running minimum Microsoft® Windows® Vista®, Microsoft® Windows® XP®, Microsoft Windows 2000®,

Warranty: Two years warranty, battery not included. Optional three year warranty available

INPUT / OUTPUTS

Transducer Cable Connectors: Communications Ports: Lemo® USB, RS232, Ethernet, Wireless Ethernet (optional), Bluetooth (optional) Character (April 1997) Start, TTL 5 V, Encoder supply – switchable 5V Alarm outputs, trigger in/out control Selectable voltage output of depth or amplitude data B-scan input: High Speed Parallel and TTL Port:

Analog Output:

PULSER

Peak Memory: Pulse repetition rate up to 20 kHz and peak envelope of A-Scan display Pulser Type: Pulser Energy: User Selectable: Tunable square wave, negative spike excitation, burst Low (100 V) and Max (400 V)

50, 57, 200, and 1000 Ohms Damping:

RECEIVER

110 dB Max and reference gain, level control in 6 dB, 1 dB, 0.5 dB and 0.1 dB selectable steps0 % to 80 % of full scale in 1 % increments
Full Wave, Half Wave Positive or Negative rectified, and RF waveform **Gain Control:**

Reject:

Rectification:

0.5 MHz to 30 MHz at -3 dB Broadband, Narrowband, or Custom Selectable Low and High Pass Filters - 1 MHz, 2 MHz, 2.25 MHz, 4 MHz, 5 MHz, 10 MHz Receiver Bandwidth:

Filters:

CALIBRATION

Auto Transducer Calibration: Automated calibration of transducer, zero offset and/or velocity

metric or microseconds From 100 to 15240 m/s in steel Units: Material Velocity:

Range: Refracted Angle: Test Modes: Standard 1 mm to 60,000 mm in steel Fixed settings of 0°, 30°, 45°, 60°, 70°, or variable from 10° to 90° in 0.1° steps for calculations Pulse Echo, Dual, or Through Transmission

GATES

Four independent flaw gates controllable over entire sweep range - Floating gate, Interface gate, Measuring gate (relative, absolute, amplitude, time), Back-wall echo attenuator Selectable threshold positive/negative or minimum depth modes **Gate Monitors:**

Alarms:

MEASUREMENTS

40 000 A-scans (up to 200 000 optional) – printscreen PNG, A-scan, setup 10 km of B-scan, 1 mm resolution Freezes Peak Memory echo envelope for recorded waveform comparison with live A-Scan A-scan memory:

B-scan memory:

Peak Hold: Auto Gate: Thickness

DAC: TCG: Standard, up to 20 points, 111 dB dynamic range (71dB continual) For echo amplitude adjustment and evaluation

Automatically
Auto Gain echo, Auto Freeze Curvature correction: Spot weld:
