Bending Coating Tester NOVOTEST BEND-M1519

The device complies with **ISO 1519-73**, **DIN 53 152** and applies to paints and specifies a method for determining the elasticity of the film by bending. The device allows to measure the elasticity and strength of coatings through bending the metal plate with tested coating around a set of cylindrical rods with diameters from 2 mm to 32 mm.

Bending Test Conical Mandrel NOVOTEST BEND-6860

The NOVOTEST BEND-6860 is used to determine the elasticity or resistance, adhesion and elongation of coatings on sheet metal in accordance with **ISO 6860**, **ASTM D 522-A, BS 3900-E11, ECCA T7.**

The sample is clamped against a conical mandrel and is bent around the mandrel by a roller mounted on a hand operated lever.

The diameter of the mandrel at the point where the coating of the sample starts to crack can be determined from a scale (3-37 mm) marked on the sample clamp.
