

123/125/127 are used to measure the moisture level in sawn timber (also cardboard, paper) and hardened materials (plaster, concrete and mortar). They display the moisture level. The instruments have an average adjustment for European wood based on a wood temperature of 20°C.

127 is 2 in 1 digital and analog moisture meter

DT-129 is a conductivity moisture instrument designed for use in wood.

- Large LCD display
- Automatically Temperature Corrected (ATC) Readings when used with the temperature probe(129)
- Readings with Moisture Probe or Hammer Electrode
- Readings with Integral Electrode Pins

Built in Pins

Optional remote probe
